## ABOUT ME

- ▶ How many have started using CF2016 in prod? In dev?
  - ▶ Have at least seen resources about it?
  - ▶ Not surprised if few: people often wait
- ▶ Anyone “waiting for first point release”?
  - ▶ Have been 3 updates already
- ▶ How many likely won't use it until next release comes out (CF2018, or whatever)?
  - ▶ I do these talks, not just for those making the move now, soon, or have already
  - ▶ But also those who may see it in future 😊
- ▶ Anyone know when I started doing hidden gems in CF?
  - ▶ 4.0.1 in 1999
- ▶ So, let's look first at the major new features (only brief overview)

## SOME INTRO QUESTIONS FOR YOU

- ▶ API Manager
- ▶ Security Code Analyzer
- ▶ PDF Improvements (redaction, sanitization, more)
- ▶ CFML language improvements (tags, functions, and more)
- ▶ Security improvements (especially more NTLM support)
- ▶ Performance improvements
- ▶ More about some of these later
  
- ▶ Now, on to the more “hidden” gems!

## MAJOR FEATURES OF CF2016

- ▶ Removal of Akamai Download Manager!
  - ▶ Previously, when downloading CF installer from Adobe, we were forced to use this
  - ▶ Now just generally a better experience (I suppose some may miss it)
  - ▶ [carehart.org/blog/client/index.cfm/2016/2/19/cf2016\\_download\\_no\\_longer\\_requires\\_Akamai\\_DL\\_mgr](http://carehart.org/blog/client/index.cfm/2016/2/19/cf2016_download_no_longer_requires_Akamai_DL_mgr)
- ▶ Unfortunately, CF install has gotten huge because of API Manager
  - ▶ Especially tragic if you'll be using CF Standard: by license can't use API Mgr
  - ▶ This is "to be fixed" ([bugbase.adobe.com/index.cfm?event=bug&id=4155910](http://bugbase.adobe.com/index.cfm?event=bug&id=4155910))
- ▶ During installation, you're asked whether/how to install API Manager
  - ▶ And whether to implement it within JVM or as own service

## INSTALLATION GEMS

- ▶ CFscripts folder now moved to its own directory, not in CFIDE!
  - ▶ Great move for security, administration
  - ▶ New folder called cf\_scripts, found in the cfusion wwwroot
  - ▶ Pointed to as a virtual directory in IIS, Apache, etc.
  - ▶ Related to this...
- ▶ CF Admin now available only via internal web server by default
  - ▶ This is another very good thing, for security
  - ▶ You REALLY should not try to override this, but I discuss options in my blog post below
- ▶ Let's move on to gems WITHIN the CF Admin...

## CONFIGURATION GEMS

- ▶ CF Admin option to store CF sessions in redis (cache) rather than heap memory
  - ▶ [helpx.adobe.com/content/help/en/coldfusion/2016/external-session-storage.html](http://helpx.adobe.com/content/help/en/coldfusion/2016/external-session-storage.html)
  - ▶ Gotcha: works only with CF sessions, not “J2EE sessions”
    - ▶ Those using “j2ee sessions” could modify Tomcat (underlying CF) on their own
    - ▶ [blog.svajlenka.com/post/125784752315/redis-and-coldfusion-because-why-not](http://blog.svajlenka.com/post/125784752315/redis-and-coldfusion-because-why-not)
- ▶ New admin setting to disable “REST discovery” by API Manager
  - ▶ See Settings page, last setting
- ▶ For more on these admin and config changes, see
  - ▶ [carehart.org/blog/client/index.cfm/2016/2/23/cf2016\\_CF\\_Admin\\_changes](http://carehart.org/blog/client/index.cfm/2016/2/23/cf2016_CF_Admin_changes)

## ADMINISTRATION GEMS

- ▶ Many new improvements related to the web server config tool
- ▶ Fixed: no longer any need to manually reconfigure connectors after update!
  - ▶ CF Update mechanism handles this for us automatically now
  - ▶ WsConfig offers new “upgrade” option, if ever needed
- ▶ Fixed: for those using multiple instances (in CF Enterprise/Trial/Dev)
  - ▶ Wsconfig UI finally offers option to pick instance name to connect to (like <= CF9)!
  - ▶ In CF10/11, we had to start wsconfig in instance's runtime\bin to connect site to it
- ▶ Fixed: if you open wsconfig UI while already open, you no longer get blanks
  - ▶ You get warning that you may already have it open
- ▶ ...

## WEB SERVER CONFIG TOOL (WSCONFIG) GEMS

- ▶ WSCONFIG UI now tracks number of sites in web server configured or not
- ▶ Now offers both an "all" option (for all sites) and an "all - individually"
  - ▶ Which instead creates a new connector for **each site** (using the selected settings)
  - ▶ Appears only if you do have more than 1 web site in web server
- ▶ WSCONFIG UI now offers option to all 3 connector tuning args
  - ▶ Found under "advanced settings"
  - ▶ Previously only offered connection\_pool\_timeout, max\_reuse\_connection
    - ▶ Now offers allows configuration of connection\_pool\_size also
  - ▶ Sadly, installer's web config step does not offer these 3 configurable options
    - ▶ Due to be fixed in a new installer:  
[bugbase.adobe.com/index.cfm?event=bug&id=4155913](http://bugbase.adobe.com/index.cfm?event=bug&id=4155913)
- ▶ ...

## WEB SERVER CONFIG TOOL (WSCONFIG) GEMS (CONT.)

- ▶ Connector now defaults to timeout of 60 (seconds); was 0 (infinite) before
- ▶ For IIS: better connector tuning settings for 2-site setup by default
  - ▶ `Conneciton_pool_size` (500), `max_reuse_connections` (250):
  - ▶ Sadly, for now, this is not so for Apache configs, but is due to be fixed in upcoming update
- ▶ CF2016 also now includes `maxthreads="500"` and `connectionTimeout="60000"` in `server.xml`, by default
- ▶ "Advanced Settings" now also offers "skip iis custom errors" option
  - ▶ Disabled by default. Useful for some scenarios
  - ▶ Needed to add manually to `isapi_redirect.properties` file in CF10/11
- ▶ Nice to see all these improvements to the `wsconfig`, which has been a source of heartburn in CF10 and 11. Let's move on to other gems...

## WEB SERVER CONFIG TOOL (WSCONFIG) GEMS (CONT.)

- ▶ New command-line interface (CLI)
  - ▶ Allows cmd line CFML execution by pointing to a cfm file, via cf.bat
    - ▶ As in, **cf.bat some\_file.cfm**
    - ▶ Not a real interactive shell (with tab completion, etc.)
    - ▶ No repl, no package manager, no extensibility *as with CommandBox project*
  - ▶ Still, is useful for cron jobs/windows scheduler, etc. to run cfml pages
  - ▶ Quite a few options and capabilities
- ▶ For more, see
  - ▶ [helpx.adobe.com/coldfusion/2016/command-line-interface.html](https://helpx.adobe.com/coldfusion/2016/command-line-interface.html)

## NEW FEATURE GEMS

- ▶ Many enhancements to PDF support
  - ▶ Mentioned before sanitization, redaction, but also:
    - ▶ Export/import of comments, metadata
    - ▶ Archiving, including newer PDF/A-2b and -3b standards
    - ▶ Support for attachments, stamps
  - ▶ For more, see substantial article with examples, and code download
    - ▶ [adobe.com/devnet/coldfusion/articles/pdf-enhancements.html](http://adobe.com/devnet/coldfusion/articles/pdf-enhancements.html)
  - ▶ Not mentioned on that page:
    - ▶ CFPDF adds new encrypt attribute values: AES\_256R5 and AES\_256R6
- ▶ ...

# CHANGED FEATURE GEMS

- ▶ New argument for structnew, **ordered**, maintains insertion order
  - ▶ Looping over such a struct will also return in insertion order
  - ▶ All other forms of creating new structs keep same order as before
  - ▶ Also support for creating empty ordered struct
  - ▶ [helpx.adobe.com/coldfusion/2016/language-enhancements.html#CollectionsupportOrdered](http://helpx.adobe.com/coldfusion/2016/language-enhancements.html#CollectionsupportOrdered)
- ▶ ...

CHANGED FEATURE GEMS (CONT.)

- ▶ New application-level controls
  - ▶ *searchImplicitScopes*, *passArrayByReference*
  - ▶ Each can change long-standing behavior for these operations, **vastly improving performance** (5x and 25x, respectively)
  - ▶ Set as either cfapplication attributes or via this scope in application.cfc
  - ▶ See:
    - ▶ [adobe.com/devnet/coldfusion/articles/language-enhancements-cf-2016.html](http://adobe.com/devnet/coldfusion/articles/language-enhancements-cf-2016.html)

    - ▶ [helpx.adobe.com/coldfusion/2016/language-enhancements.html#Arraysbr](http://helpx.adobe.com/coldfusion/2016/language-enhancements.html#Arraysbr)
- ▶ ...

## CHANGED FEATURE GEMS (CONT.)

- ▶ CF Admin “enable whitespace management” option now suppresses whitespace at compile time as well as runtime
- ▶ Swagger doc generation (for restful api's and API Manager)
  - ▶ [helpx.adobe.com/coldfusion/2016/swagger-document-generation.html](http://helpx.adobe.com/coldfusion/2016/swagger-document-generation.html)
- ▶ Now on to language enhancements...

## CHANGED FEATURE GEMS (CONT.)

- ▶ Safe navigation operator (?.)

- ▶ Used when accessing members of a struct or values of an object
- ▶ Used instead of ".", to prevent exception if not defined, null, etc.
- ▶ Simplified code, versus nested isdefined tests

- ▶ *Examples:*

- ▶ `<cfoutput>#employee?.firstname#</cfoutput>`
  - ▶ Will output empty string if firstname does not exist/null
- ▶ `Writeoutput(employee?.name?.firstname?.trim());`
  - ▶ Will output empty string if all 3 are undefined/null

- ▶ ...

- ▶ Can't even license CF11 anymore
  - ▶ Must buy CF2016 and request "backward license" to CF11
- ▶ Annoying: while there are PDFs of CF docs... ([helpx.adobe.com/coldfusion/home.htm](http://helpx.adobe.com/coldfusion/home.htm))
  - ▶ They generally show only one level within a section, then offer a link to online page for more detail (sometimes confusing)
- ▶ ...

## TRAPS/GOTCHAS

    - ▶ Also requires CF installed in “Developer mode”, with RDS enabled
  - ▶ API Manager included in CF download, whether you can or want to install it
  - ▶ New redis-based session vars support only CFML sessions, not j2ee sessions
  - ▶ CF Installer web server config does not yet offer tuning options
- ▶ See other (few) “known issues” listed in original release and update docs
- ▶ Be sure to apply updates before believing web reports of “known bugs”. May since have been fixed!
